

CLIENT - Midland Heart

SECTOR - Housing

SERVICE - Asbestos Removal & Management

.....

Background

There was no concise asbestos register for any of the 33,000 properties within the West Midlands region. Enviro-Safe were appointed to undertake an asbestos removal programme working alongside an appointed surveying contractor, to all properties in question for one of the UK's leading housing associations.

Solution

As part of a five year contract, we undertook asbestos removal from all of the properties according to the survey reports. We worked closely with various main contractors to organise works and complete works within the designated time frame. In addition we were called upon to provide a fast and effective emergency call out service. Alongside this, we had to liaise with tenants, making appointments, discussing access arrangements and resolving any fears with regards to safety.

Result

The client now has a database containing all information relating to each aspect of each job performed, in a format both easily accessible & understandable. They also know we are on hand to offer consultancy and emergency removal works regarding any ACM's, should they require.

Project

Asbestos Removal from both tenanted and void properties

People

Creating peace of mind

Business

Asbestos removal, environmental clean & encapsulation
